

UNIVERSIDAD NACIONAL AUTÓNOMA DE MÉXICO FACULTAD DE INGENIERÍA LABORATORIO DE CIRCUITOS ELÉCTRICOS SEMESTRE 2020 - 2

Práctica 4: Escalamiento de Impedancia y Frecuencia (Previo)

Profesor:

Ing. Martha Isela Torres Hernández

Integrante:

Murrieta Villegas Alfonso

Brigada: 1

Grupo Laboratorio: 14

PREVIO LABORATORIO 4

Thursday, 23 April 2020

10:01 PM

1. Demuestre la ecuación (13)

$$y(t) = |H(jw)| sen(wt + x H(jw))$$

$$H(s) = \frac{P(s)}{Q(s)} = \frac{P(s)}{(s+P_1)(s+P_2)...(s+P_n)}$$

$$\therefore x(s) = \begin{cases} \begin{cases} se n(\omega b) \end{cases} = \frac{\omega}{s^2 + \omega^2}$$

$$V(s) = H(s) \cdot \frac{\omega}{\delta^2 + \omega^2} = \left[\frac{P(s)}{(s + P_1)(s + P_2) \dots (s + P_n)} \right] \left[\frac{\omega}{\delta^2 + \omega^2} \right]$$

Fracciones Parciales

$$y(s) = \frac{a}{s+jw} + \frac{\overline{a}}{s-jw} + \frac{b_1}{s+\rho_1} + \frac{b_2}{s+\rho_2} + \frac{b_n}{s+\rho_n}$$

=
$$ae^{-j\omega t}$$
 + $\bar{a}e^{-j\omega t}$ + $b_1e^{-\rho_1 t}$ + $b_ne^{-\rho_n t}$

Al ser un sistema estable

$$(f \vee c \varphi) = 0 \quad | \quad a = \overline{a} \quad ;$$

$$a = H(s)\left(\frac{\omega}{5^2\omega^2}\right)(s+\omega) = -H(\omega)$$

$$5=-\omega$$

$$\bar{a} = H(s) \frac{\omega}{(s+\omega)(s-\omega)} = \frac{H(\omega)}{2i}$$

$$\therefore H(\omega) = |H(\omega)| e^{i\phi} \text{ donde}$$

$$\phi = \chi H(\omega) = \tan^{-1}\left(\frac{\pi}{Re(H(\omega))}\right)$$

$$\Rightarrow \text{Simplificando expressiones}$$

$$y(t) = \frac{H(-\omega)}{2i} e^{-\omega t} + \frac{H(\omega)}{2i} e^{-\omega t}$$

$$= \left(\frac{H(\omega)}{\omega}\right) \left(\frac{e^{i\phi}}{Re(H(\omega))}\right) = \left(\frac{e^{i\phi}}{Re(H(\omega))}\right) =$$

2. Demuestre que si la función de transferencia de una red eléctrica es la razón de una corriente de rama y unacorriente de una fuente independiente de entrada, al multiplicar todas las resistencias y las inductancias poruna constante k y al dividir todas las capacitancias por la misma constante, tal función de transferencia no se modifica.

$$V_{2} = \frac{\left[\begin{array}{c} V_{11} \dots V_{m} \left(1 - 0 \right) \circ V_{m} \left(j + n \right) \\ V_{2} \dots V_{m} \right]}{\left[\begin{array}{c} V_{11} \dots V_{m} \\ V_{m1} \dots V_{m} \end{array}\right]} \left[\begin{array}{c} V_{2} \\ V_{11} \dots V_{m} \left(1 - 0 \right) \\ V_{m1} \dots V_{m} \end{array}\right]} \left[\begin{array}{c} V_{2} \dots V_{m} \\ V_{m1} \dots V_{m} \end{array}\right]} \left[\begin{array}{c} V_{2} \dots V_{m} \\ V_{m1} \dots V_{m} \end{array}\right]} \left[\begin{array}{c} V_{2} \dots V_{m} \\ V_{m1} \dots V_{m} \end{array}\right]} \left[\begin{array}{c} V_{2} \dots V_{m} \\ V_{2} \dots V_{m} \end{array}\right]} \left[\begin{array}{c} V_{2} \dots V_{m} \\ V_{2} \dots V_{m} \end{array}\right]} \left[\begin{array}{c} V_{2} \dots V_{m} \\ V_{2} \dots V_{m} \end{array}\right]} \left[\begin{array}{c} V_{2} \dots V_{m} \\ V_{2} \dots V_{m} \end{array}\right]} \left[\begin{array}{c} V_{2} \dots V_{m} \\ V_{2} \dots V_{m} \end{array}\right]} \left[\begin{array}{c} V_{2} \dots V_{m} \\ V_{2} \dots V_{m} \end{array}\right]} \left[\begin{array}{c} V_{2} \dots V_{m} \\ V_{2} \dots V_{m} \end{array}\right]} \left[\begin{array}{c} V_{2} \dots V_{m} \\ V_{2} \dots V_{m} \end{array}\right]} \left[\begin{array}{c} V_{2} \dots V_{m} \\ V_{2} \dots V_{m} \end{array}\right]} \left[\begin{array}{c} V_{2} \dots V_{m} \\ V_{2} \dots V_{m} \end{array}\right]} \left[\begin{array}{c} V_{2} \dots V_{m} \\ V_{2} \dots V_{m} \end{array}\right]} \left[\begin{array}{c} V_{2} \dots V_{m} \\ V_{2} \dots V_{m} \end{array}\right]} \left[\begin{array}{c} V_{2} \dots V_{m} \\ V_{2} \dots V_{m} \end{array}\right]} \left[\begin{array}{c} V_{2} \dots V_{m} \\ V_{2} \dots V_{m} \end{array}\right]} \left[\begin{array}{c} V_{2} \dots V_{m} \\ V_{2} \dots V_{m} \end{array}\right]} \left[\begin{array}{c} V_{2} \dots V_{m} \\ V_{2} \dots V_{m} \end{array}\right]} \left[\begin{array}{c} V_{2} \dots V_{m} \\ V_{2} \dots V_{m} \end{array}\right]} \left[\begin{array}{c} V_{2} \dots V_{m} \\ V_{2} \dots V_{m} \end{array}\right]} \left[\begin{array}{c} V_{2} \dots V_{m} \\ V_{2} \dots V_{m} \end{array}\right]} \left[\begin{array}{c} V_{2} \dots V_{m} \\ V_{2} \dots V_{m} \end{array}\right]} \left[\begin{array}{c} V_{2} \dots V_{m} \\ V_{2} \dots V_{m} \end{array}\right]} \left[\begin{array}{c} V_{2} \dots V_{m} \\ V_{2} \dots V_{m} \end{array}\right]} \left[\begin{array}{c} V_{2} \dots V_{m} \\ V_{2} \dots V_{m} \end{array}\right]} \left[\begin{array}{c} V_{2} \dots V_{m} \\ V_{2} \dots V_{m} \end{array}\right]} \left[\begin{array}{c} V_{2} \dots V_{m} \\ V_{2} \dots V_{m} \end{array}\right]} \left[\begin{array}{c} V_{2} \dots V_{m} \\ V_{2} \dots V_{m} \end{array}\right]} \left[\begin{array}{c} V_{2} \dots V_{m} \\ V_{2} \dots V_{m} \end{array}\right]} \left[\begin{array}{c} V_{2} \dots V_{m} \\ V_{2} \dots V_{m} \end{array}\right]} \left[\begin{array}{c} V_{2} \dots V_{m} \\ V_{2} \dots V_{m} \end{array}\right]} \left[\begin{array}{c} V_{2} \dots V_{m} \\ V_{2} \dots V_{m} \end{array}\right]} \left[\begin{array}{c} V_{2} \dots V_{m} \\ V_{2} \dots V_{m} \end{array}\right]} \left[\begin{array}{c} V_{2} \dots V_{m} \\ V_{2} \dots V_{m} \end{array}\right]} \left[\begin{array}{c} V_{2} \dots V_{m} \\ V_{2} \dots V_{m} \end{array}\right]} \left[\begin{array}{c} V_{2} \dots V_{m} \\ V_{2} \dots V_{m} \end{array}\right]} \left[\begin{array}{c} V_{2} \dots V_{m} \\ V_{2} \dots V_{m} \end{array}\right]} \left[\begin{array}{c} V_{2} \dots V_{m} \\ V_{2} \dots V_{m} \end{array}\right]} \left[\begin{array}{c} V_{2} \dots V_{m} \\ V_{2} \dots V_{m} \end{array}\right]} \left[\begin{array}{c} V_{2} \dots V_{m} \\ V_{2} \dots V_{m} \end{array}\right]} \left[\begin{array}{c} V_{2} \dots V_{m} \\ V_{2} \dots V_{m} \end{array}\right]} \left[\begin{array}{c} V_{2} \dots V_{m} \\ V_{2} \dots V_{m} \end{array}\right]} \left[\begin{array}{c} V_{2} \dots V_{m} \\ V_{2} \dots V_{m} \end{array}\right]} \left$$

4. En la figura 5, se presenta un filtro eléctrico pasa banda, con frecuencia central Si se desea que el filtro eléctrico presente las mismas características de magnitud y fase a la frecuencia centraldefo= $10\pi[kHz]$ y con C= $10\eta F$. Determine los nuevos valores de R y L que se deben emplear.
